Awards

Description

Sky Horizon is a dynamic “Off Grid” installation using solar power to gather and store energy during the day. At night the energy is channelled into a ribbon of different coloured LED strips. These are activated using Infrared motion detectors. As the energy decays so too does the light until it is replenished the following day.

This was awarded 2nd place in the competition for Dublin City Council, sponsored by Covanta for two urban sites in Dublin. The installation had to be both robust and capable of being relocated on a 6 month cycle.
